

REACH; regulation (EU) no. 1907/2006

The main aim of REACH, regulation (EU) no. 1907/2006, is to ensure high levels of protection for people and the environment from unintentional exposure to chemical substances. The majority of the chemical substances that one encounters in everyday life must be registered by the manufacturer and/or importer. Registration ensures that documentation is drawn up for the impact of the substance on people and the environment.

Waste and products made from recycled waste do not need to be registered if recycling takes place within the EU and the substances that are recovered during the recycling process are the same that entered the process. This means that aluminium alloys produced by recycling by Stena Aluminium are exempted from REACH registration according to art 2.7 (d) in the regulation.

Alloying elements (additives) in aluminium alloys produced by Stena Aluminium are registered according to REACH with the following REACH registration numbers:

<i>Substance</i>	<i>REACH registration number</i>
Al, Aluminium	01-2119529243-45-xxxx
Aluminium potassium fluoride	01-2119513404-51-xxxx
Fe, Iron	01-2119462838-24-xxxx
Alloy of FeSi, Ferrosilicon	912-631-7 (MCS)
Mg, Magnesium	01-2119537203-49-xxxx
Mn, Manganese	01-2119449803-34-xxxx
Ni, Nickel	01-2119438727-29-xxxx
Zn, Zink	01-2119467174-37-xxxx

Aluminum alloys made from Stena Aluminum do not contain any substance, of a concentration above 0.1% by weight, currently listed in the candidate list. If any substance contained in Stena Aluminiums alloys in quantities higher than 0.1% by weight is included on the candidate list in the future, we will provide information on this substance to recipients.

Stena Aluminium AB
